

2011 PRODUCT SPECIFICATIONS & PRICE GUIDE

Real-Time Flight Status Information for Your Guests

FlightTimeTV utilizes real-time data from the United States Federal Aviation Administration, as well as individual airports all over the world. Our proprietary informational cross-checking system ensures the most up-to-date, accurate information, all the time.

Information available on flight arrival times, departures, delays or cancellations for every flight from every airport in the world.

For Hotels, Resorts, Restaurants, Convention Centers and any other segment of the hospitality industry.

FTTV has proven to be a valuable amenity garnering praise for locations from Guests, and for **FTTV** from within the industry. In most cases, the monthly rate is cheaper than the average rate for a hotel's single night stay.

- New, updated content is downloaded and displayed within a window of 1 and 4 hours. This is a default setting which can be adjusted to best suit your situation.
- Can be offered to guests as a complimentary service, utilized by the location to stay on top of potential room overflow, tracking incoming flights for business, or even personal arrivals
- Available via video, HTML and RSS feeds, **FTTV** can be integrated into the media already present at your location; your guest room TV network or digital signage message boards.
- **FlightTimeTV's** search widgets let users search for their airline to get instant information on their specific flight (Available on in-room and concierge systems).
- Depending on screen size, **FTTV** can show flight information for up to 3 airports on a single screen (Minimum screen size for this capability is 52").

• VIDEO •

Inhouse-developed hardware with integrated RF modulator/amplifier and coax output allows the FTTV to be broadcast directly over the Guest TV Network of your hotel.

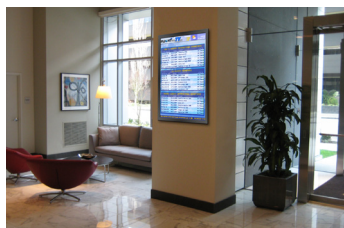

• HTML •

An HTML feed is available for integration into digital signage throughout your hotel. No additional hardware is needed with this delivery method.

• RSS FEED •

Highly customizable, easily integratable XML code to compliment existing content on digital signage screens in the lobby, breakfast area or bar. No additional hardware is needed.

FlightTimeTV Display Applications

Dedicated

Display on a dedicated system in your lobby or common areas

Existing Reader Board

Incorporate **FTTV** into existing digital signage

In Room

Broadcast flight information over in-room Guest TV Network

FlightTimeTV

FlightTimeTV HARDWARE & SETUP SPECIFICATIONS

Hardware Requirements:

- 1 Computer running Windows 7, Windows XP Home or Vista with 1GB Ram
- 1 Graphics card
- 1 RF modulator
- S-Video input modulator (Otherwise a conversion box is required to transmit signal from S-Video to coax)

* **FlightTimeTV** requires minimal bandwidth or system resources. Windows and Flash required.

* A frequency agile modulator, which can set it to multiple channels, is recommended. A non-agile modulator can be used but does not provide the flexibility should the hotel television system start broadcasting on that channel.

Cables:

- S-Video cable for connection from computer to modulator
- Coaxial cable for connection from Modulator to Television system
- Ethernet cable for internet connection to the computer

* A combiner may be necessary to connect the Modulator to the Television system. The combiner can also be sold as a 2-way splitter, or splitter/combiner.

FlightTimeTV HARDWARE REFERENCE GUIDE

NOTE: If the service option you choose requires hardware, **FTTV** can include a complete system at discounted rates. If some hardware exist, **FTTV** can supply any additional hardware needs at discounted rates. See Order Form on the last page for prices.

If location has a PC:

1. Modulator
2. Power supply for modulator
3. S-Video Output (either through graphics card or vga adapter)
4. S-Video Cable
5. Coax Cable
6. Combiner

If location has a PC & RF modulator:

1. Cables necessary to connect one to the other (depends on their available setup, nothing needed from us)

If location has an RF Modulator:

1. PC
2. Cables necessary to connect PC to modulator (dependant on the existing setup, nothing needed from us)

FlightTimeTV RATES
